Task 1 STOCK ANALYSIS REPORT

Reliance Industries • TCS • HDFC Bank | Indian Equity Market

NAME : TWINKLE ROY

Study period: 17 October 2025–16 October 2026 | Prepared: 18 October 2026

1. Objective and methodology

This report compares three large Indian listed companies from different sectors: Reliance Industries (energy, retail and digital services), Tata Consultancy Services (IT services) and HDFC Bank (banking). Historical adjusted closing prices from the supplied workbook were used to calculate one-year price return. The first available trading date is 17 October 2025 and the final date is 16 October 2026. Valuation figures are market snapshots for 16 October 2026 and can vary by source and time.

Adjusted price return = (last adjusted close ÷ first adjusted close − 1) × 100. The indexed chart sets each stock's starting adjusted price to 100, allowing relative performance to be compared despite different share prices. This is a historical price measure, not a forecast or investment recommendation.

2. One-year performance and valuation

Company	Adjusted close 17-Oct-2025	Adjusted close 16-Oct-2026	Price return	P/E
Reliance Industries	₹1,410.28	₹1,211.20	-14.12%	21.93×
TCS	₹2,839.64	₹2,465.00	-13.19%	17.28×
HDFC Bank	₹986.24	₹728.85	-26.10%	14.24×

Company	Market cap (₹ crore, approx.)	Interpretation
Reliance Industries	1,639,000	Largest market value in this sample; diversified business mix.
TCS	892,000	IT services business; valuation reflects earnings and growth expectations.
HDFC Bank	1,123,000	Banking business; bank-specific indicators such as asset quality and margins also matter.

Valuation source: StockAnalysis.com market snapshots dated 16 October 2026. Market capitalisation has been converted from ₹ trillion to ₹ crore and rounded. P/E ratios are trailing ratios reported by that source.

Indexed price trend

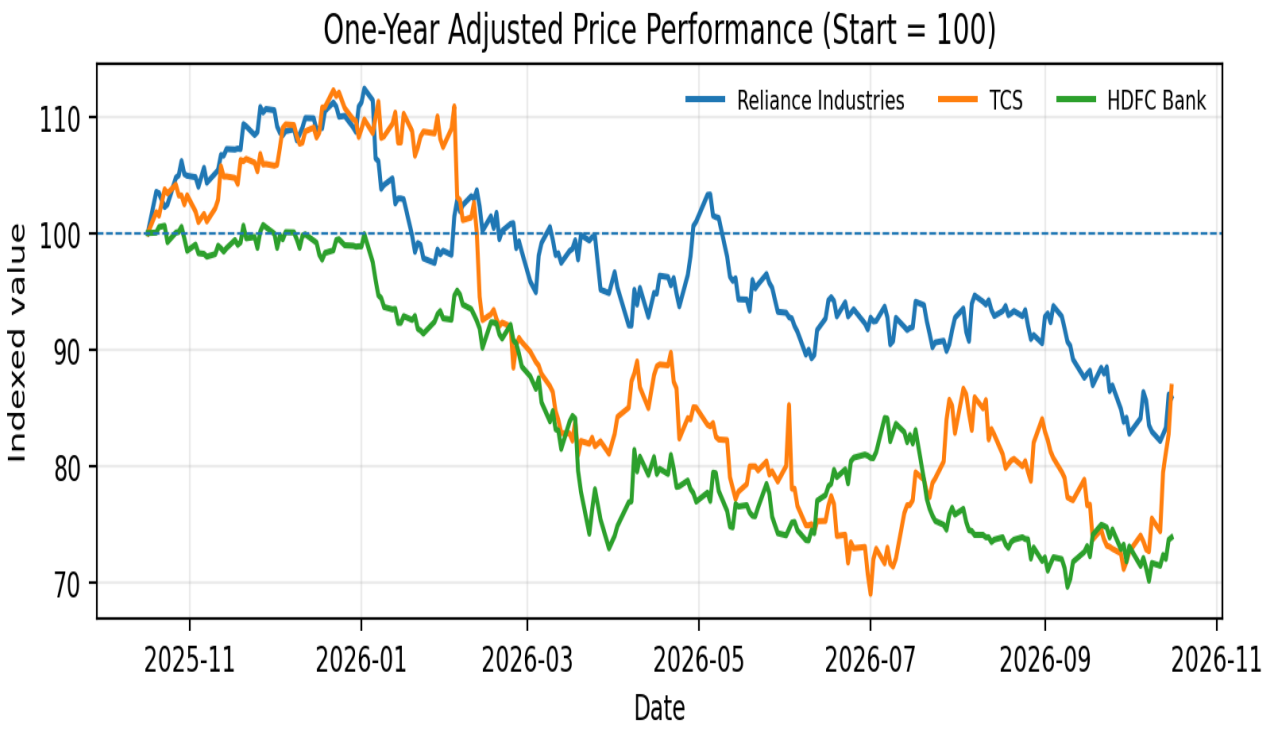

Figure 1. Indexed adjusted closing price (start date = 100). Source: historical price data in the supplied workbook.

3. Findings and comparative analysis

All three stocks ended the study period below their starting adjusted prices. TCS had the smallest decline (-13.19%), followed closely by Reliance Industries (-14.12%). HDFC Bank recorded the largest decline (-26.10%). This comparison describes the period observed; it does not by itself explain the causes of the price changes.

Reliance Industries had the largest market capitalisation at approximately ₹16.39 lakh crore, followed by HDFC Bank at ₹11.23 lakh crore and TCS at ₹8.92 lakh crore. Reliance also had the highest P/E ratio (21.93×), while HDFC Bank had the lowest (14.24×). A higher P/E may reflect higher expected growth, perceived quality or greater optimism; it does not automatically mean a stock is better or overvalued. Cross-sector P/E comparisons have limitations because business models, leverage and accounting differ.

4. Recent news and potential implications

Reliance Industries — Jio Platforms IPO plans

Jio Platforms filed its Red Herring Prospectus on 14 October for a planned IPO scheduled for 21–23 October 2026, with an indicated valuation of up to about US$108.3 billion. This could make Jio's value more visible to investors, although IPO expectations and regulatory/market conditions remain risks.

TCS — Q2 FY2027 results and AI revenue

TCS reported Q2 FY2027 revenue of US$7.642 billion, net profit of US$1.450 billion and an operating margin of 24.0%. Annualised AI revenue exceeded US$3.1 billion and the company announced a ₹12 per-share dividend. The results show AI-related demand and deal wins as opportunities, while overall growth remains modest.

HDFC Bank — Q2 FY2027 results and leadership change

HDFC Bank's Q2 FY2027 standalone net profit rose 4.7% year on year to ₹19,510 crore. Net interest income grew 9.7%, loans grew 16.3% and deposits grew 18.8%; however, lower treasury income and a slightly lower net interest margin weighed on the result. Leadership transition is also a near-term development to monitor.

5. Key limitations

This is a one-year historical comparison of three companies, not a full valuation model. P/E and market capitalisation are snapshots and may vary across providers. The report does not compare debt, cash flow, return on equity, bank asset quality in depth, dividends reinvested, or risk-adjusted returns. News items are context, not proof that a particular event caused a stock-price movement.

6. Conclusion

Across 17 October 2025 to 16 October 2026, TCS showed the most resilient price performance among the three stocks, although its adjusted price still declined by 13.19%. Reliance Industries declined by 14.12%, while HDFC Bank declined by 26.10%. Reliance remained the largest company by market value and had the highest P/E multiple in this comparison. HDFC Bank's lower P/E should be considered alongside its banking fundamentals, including lending margins, loan growth and asset quality; TCS's outlook depends in part on enterprise IT spending, deal conversion and growth in AI-related services. Reliance's planned Jio Platforms IPO may provide greater visibility into the digital business, but its eventual implications remain uncertain.

The main lesson is that price performance, valuation and company-specific developments should be assessed together. None of these indicators alone establishes which stock will perform best in the future. This report is for academic analysis only and is not investment advice.
