INVESTMENT PORTFOLIO CREATION

Hypothetical portfolio of ■1,00,000 | Prepared by Twinkle Roy

1. Objective and approach

The objective is to construct a hypothetical portfolio that demonstrates asset allocation, diversification, investment rationale and risk awareness. The portfolio combines individual Indian equities, exchange-traded funds (ETFs), and a small cryptocurrency allocation. The allocation is for an academic exercise only and is not a personalized investment recommendation.

Asset class	Allocation	Share of portfolio	Purpose
Stocks	■50,000.00	50%	Company-specific equity exposure
ETFs	■40,000.00	40%	Broad-market and gold exposure
Cryptocurrency	■10,000.00	10%	Limited speculative exposure
Total	**■1,00,000**	**100%**	**Planned allocation**

2. Asset allocation

Stocks receive 50% of the planned capital, ETFs receive 40%, and cryptocurrency receives 10%. The stock portion is split across HDFC Bank, Reliance Industries and Tata Consultancy Services. The ETF portion is split between a Nifty 50 ETF and a gold ETF. Cryptocurrency exposure is limited to Bitcoin and Ethereum because these assets can experience substantial price swings.

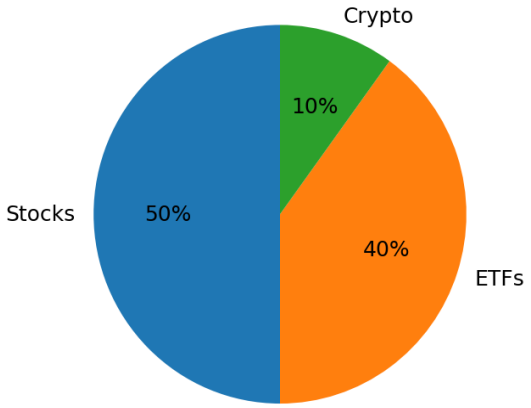

Figure 1. Planned allocation by asset class. Percentages are based on the full ■1,00,000 budget, not the final amount used to buy whole shares or ETF units.

INVESTMENT RATIONALE AND RISK REVIEW

Prepared by Twinkle Roy

3. Rationale for each investment

Investment	Planned amount	Rationale	Main risk
HDFC Bank HDFCBANK	■20,000.00	Diversified banking exposure and potential long-term growth	High
Reliance Industries RELIANCE	■15,000.00	Diversified business exposure across energy, retail and digital services	High
Tata Consultancy Services TCS	■15,000.00	Exposure to the IT services industry and global technology spending	High
Nippon India ETF Nifty 50 NIFTYBEES	■25,000.00	Broad exposure to large Indian companies through the Nifty 50 index	Moderate to High
Nippon India ETF Gold BeES GOLDBEES	■15,000.00	Gold exposure for diversification and as a potential hedge during market stress	Moderate to High
Bitcoin BTC	■7,000.00	Limited speculative allocation to Bitcoin due to high volatility	Very High
Ethereum ETH	■3,000.00	Limited speculative allocation to Ethereum due to high volatility and technology-related risks	Very High

4. Implementation and cash balance

Using the prices and quantities entered in the accompanying spreadsheet, the planned budget is ■1,00,000. After rounding stock and ETF purchases down to whole units, the estimated amount invested is ■98,714.75 and the remaining cash is ■1,285.25. The cash balance is not a loss; it is unspent capital caused by whole-unit purchases. Crypto quantities are fractional in this hypothetical example. Transaction costs, taxes, bid–ask spreads and tracking differences are excluded.

5. Risk management and limitations

The portfolio spreads capital across companies, a broad Indian equity index, gold and cryptocurrency, but it is not risk-free. The individual stocks overlap partly with the Nifty 50 ETF, so the portfolio still has meaningful Indian equity-market exposure. Gold prices can also decline, and cryptocurrency is highly volatile and may suffer large losses. A real investor would need to consider time horizon, liquidity needs, ability to tolerate losses, costs, taxes and rebalancing rules before investing.

6. Conclusion

This hypothetical portfolio demonstrates how an investor can set an allocation target, select assets for different roles, record the rationale and identify risks before investing. The planned allocation is 50% stocks, 40% ETFs and 10% cryptocurrency. It should be reviewed periodically rather than assumed to deliver a particular return.

Data note

The accompanying spreadsheet lists market-price inputs with a reference date of 16 October 2026. These prices were taken from the working spreadsheet and have not been independently audited for this report. Before final submission, verify each price against a reliable historical source and keep the source links or names in the spreadsheet. This report does not forecast returns and is for educational purposes only.
